

**FT60 TuffGuard Recreational Backboard Padding**

1. **PADDING CONSTRUCTION** - Padding shall be cellular construction with a skin of average minimum thickness of .06". The skin shall be a minimum 125 psi. Padding shall be specially designed to shed rainwater so as to allow for indoor or outdoor use. The padding system shall be capable of mounting to all brands and styles of 60" wide rectangular backboards by means of self-drilling screws (provided). A steel track molded into the padding shall provide rigidity and strength to the mounting system. The two "L" shaped padding segments shall be joined in the center by molded line-up stubs. The corners of the padding shall be molded square for maximum safety and shall not require mitering, gluing or forming for attachment. All hardware shall be zinc-plated. Padding system shall be available in a variety of colors. Colors shall be continuous throughout the thickness of the padding, not only the skin. Padding shall carry a 1-Year Limited Warranty. Approximate shipping weight 8# each.
